PROFESSIONAL SUMMARY

B.Sc. Data Science graduate with hands-on experience building and deploying production-grade ML systems, including **multi-agent AI pipelines and MLOps infrastructure** on AWS. Skilled in **LLMs, agentic AI**, and scalable AI application development, with a track record of turning ideas into working, deployable systems. Seeking an AI Engineering internship to apply this expertise to real-world AI products.

EDUCATION

Degree	Board	Percentage/CGPA	Year
Bachelors of Data Science and Analytics	Mumbai University	10.00/10.00	2026
Higher Secondary Education	Maharashtra State Board of Higher Secondary Education	92.78%	2023

SKILLS

Programming Languages: Python, SQL.

Libraries & Frameworks: PyTorch, Scikit-learn, Pandas, NumPy, **LangChain, LangGraph, LangSmith**, NLTK, Hugging Face, Transformers, Unsloth.

Tools & Skills: FastAPI, Docker, Git, GitHub, **n8n**, CI/CD, MLflow, MLOps, **Fine-tuning Models**.

Coursework: Machine Learning, **Deep Learning**, Natural Language Processing, Probability & Statistics, Linear Algebra.

PROJECTS

Boss-Employee Agentic RAG System | [Github](#)

- Built a multi-agent AI system simulating an office workflow, where a boss agent dynamically assigns tasks to **specialized agents (Data Analysis, Research)**.
- Designed an **Agentic Retrieval-Augmented Generation (RAG) pipeline** integrating SQL, vector store, and graph database for adaptive information retrieval, **which is being used by the agents as a tool**. Enabled multi-step reasoning and planning using agent-based workflows to improve task execution and contextual response quality.
- Integrated **observability using LangSmith** to monitor errors, **latency**, and workflow execution, achieving **~11-50 seconds** response time depending on query complexity.

CFPB Complaint Intelligence System — End-to-end MLOps pipeline | [Github](#)

- Built and deployed dual NLP models (PyTorch MLP, Scikit-learn MLP) for complaint product classification (**86% F1**) and urgency detection (**85% F1, 99% precision**).
- Designed an NLP preprocessing and feature engineering pipeline with **MLflow-based experiment tracking and model versioning**. Automated containerized deployment to AWS EKS using **Docker, Kubernetes**, and a full CI/CD pipeline via **GitHub Actions**.
- Troubleshooted and resolved production infrastructure issues (node sizing, memory limits, AWS account constraints) to ensure reliable model serving.

Vidyut Sanchay – AI-Powered Power Grid Procurement System | [Github](#)

- Developed an AI system combining Machine Learning + Agentic AI to optimize raw material planning for power grid infrastructure.
- Built an ExtraTrees-based model (**88% F1**) to predict material requirements and designed a multi-agent pipeline (Price, Logistics, Risk) for cost estimation, routing, and risk analysis.
- Integrated real-time APIs for market and logistics data, and deployed the system using Docker for scalable, production-ready execution, achieving **~5-20 seconds** response time.

Langgraph AI notes workflow | [Github](#)

Architected an **autonomous, self-correcting agent workflow (AI Notes Maker)** with LangGraph, orchestrating Gemini/Mistral LLMs and Wikipedia-enriched context to **generate and refine** study notes via **human-in-the-loop feedback**, backed by **SQLite checkpointing** and a real-time Streamlit dashboard.

CO-CURRICULAR/CERTIFICATES

- Tech Storm: **Hackathon**
- Google's Genai Exchange Hackathon: worked with Google Cloud and made my first gen AI project - RAG.
